

TG1.AI

THE #1 AI GROWTH OS FOR TELEGRAM

Angel Round

Business Plan

Multi-Account TG Orchestration + AI Lead Generation
System Account Licensing • From \$199/mo

Project	TG1 (Telegram Growth Intelligence)
Domain	tg1.ai
Version	v3.1
Date	2026-05-18
Round	Angel
Raise	¥500k CNY (~\$71k USD)
Post-money	¥4.5M
Equity Offered	11.1% (negotiable)

Unauthorized copying or distribution is prohibited.

TG1 Business Plan (Angel Round)

TG1 (Telegram Growth Intelligence)

Multi-Account TG Orchestration + AI Lead Generation Platform

Business Model: **System Account Licensing** — Monthly subscription for customized TG accounts + AI personas + industry knowledge base + massive group coverage

Document Version: v3.0 | Date: 2026-05-18 | Round: Angel

1. Executive Summary

1.1 One-Liner

TG1 sells the right to use "customized TG accounts + AI personas + industry knowledge bases + thousands of target groups" as a monthly subscription. Starting at \$199/month, customers log in and start acquiring leads.

1.2 Business Model at a Glance

Customers don't buy a tool — they buy a 7×24 AI-driven lead-gen team.

1.3 Three Subscription Tiers (Core Pricing)

Plan	Monthly	TG Accounts	AI Target Groups	Target Customer
Starter	\$199 / mo	3 custom accounts	500	Solo / small teams
Growth	\$299 / mo	5 custom accounts	1,000	Mid-size export / e-com
Pro	\$599 / mo	10 custom accounts	3,000	Crypto projects / large clients

Every tier includes:

- **Industry-customized TG accounts** (username / avatar / bio / language matched)
- **AI persona customization** (Pro Sales / Technical Analyst / Active Member, etc.)
- **Auto-generated industry knowledge base** (scraping + Vertex AI Embedding)

- **AI precision lead-gen** (group monitoring + intent detection + opener generation + multi-turn negotiation)
- **Sales takeover workbench** (CRM + Inbox Copilot mode)
- **Auto-replacement for banned accounts**

1.4 Why This Model Works

Build It Yourself	Use TG1
Register accounts (SMS + proxies + device fingerprints)	Platform supplies pre-warmed accounts
Buy proxies (IP2World / 911s5)	Platform's proxy pool already bound
Warm up accounts for 30+ days	Accounts already past warm-up
Find industry groups (manual search + join rate limits)	500-3000 industry groups instantly covered
Curate industry knowledge base	AI auto-scrapes + embeds
Develop control scripts (6+ months)	50+ services ready to use
Integrate AI (GPT/Gemini)	Vertex AI Gemini integrated
Banned = start over	Auto-replacement + role-based risk control
Cost: ¥300k upfront + 6 months + ongoing ops	Cost: \$199/mo, 5-minute setup

1.5 Key Achievements (Already Built)

- **All 9 development stages completed:** account lifecycle, AI marketing, CRM, dashboard, monitoring
- **1000+ account capacity already implemented:** Listener sharding, multi-replica workers, PG/Redis tuning
- **Complete AI pipeline:** pgvector (HNSW 768d) + Vertex AI Gemini + Copilot mode
- **Code assets:** 50+ backend services, 25+ frontend pages, Alembic migration framework
- **Production-ready deployment:** Docker Compose + Nginx + Cloudflare + multi-replica

1.6 Funding Request

Item	Detail
Round	Angel
Amount	¥ 500,000 CNY (~\$ 71,000 USD)
Valuation	Pre-money ¥4M / Post-money ¥4.5M
Equity offered	~11.1% (negotiable 10-15%)
Runway	12 months
Use of funds	Account pool 30% / Team 25% / Infra 25% / Marketing 15% / Reserve 5%

2. Market Opportunity

2.1 Industry Trends

- **Telegram MAU passed 900M (2025)**, fastest-growing private-traffic channel for global teams
- **WeChat increasingly bans export accounts**, driving export businesses to TG

- **Web3 / Crypto:** 90% of projects use TG as their primary community channel
- **TG account price rising:** high-quality aged accounts ¥100-500 each on black market, with supply heavily reliant on grey-market chains

2.2 Target Customers (ICP)

Type	Profile	Pain Point	Monthly Budget
Crypto / Web3 Projects	Exchanges, DeFi, NFT projects	Community + high-ticket conversion	Pro \$599+ (multi-seat)
Cross-border E-commerce	Shopify sellers, DTC brands	Funnel from TG to conversion	Growth \$299
B2B Exporters	SMB exporters, freelance traders	Continuous overseas client acquisition	Starter \$199
Global Gaming / SaaS	Cross-border startups	User acquisition + retention	Growth/Pro \$299-599
MCN / KOL Operators	TG channel matrix operators	Multi-account matrix management	Pro \$599+

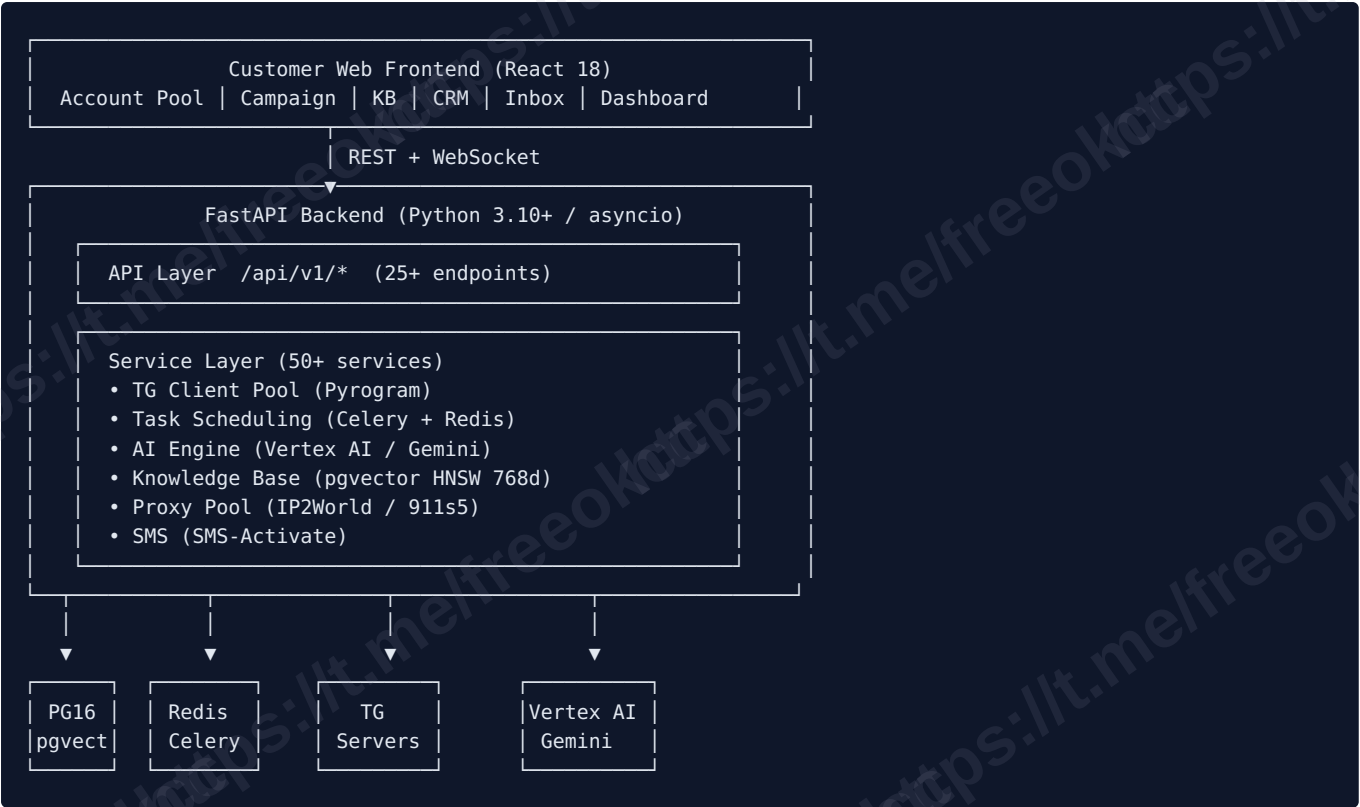

2.3 Market Sizing

Tier	Scope	Estimate
TAM	Global TG private-traffic marketing tools	USD 3B/year
SAM	Chinese cross-border teams + Web3 projects	USD 600M/year
SOM (3-year achievable)	Top 5-10% of Chinese export teams	¥50M ARR (~\$7M)

A single city or vertical can support the angel-round target: Shenzhen cross-border e-commerce alone has 10,000+ willing-to-pay customers.

3. Product Architecture

3.1 System Overview

3.2 Tech Stack

Layer	Technology	Rationale
Backend	FastAPI + SQLAlchemy + Pyrogram	Async-friendly, native fit for TG protocol
Task Queue	Celery + Redis	Thousand-account concurrency, sharded scaling
Database	PostgreSQL 16 + pgvector + Alembic	Single DB for business data + vector search
AI	Vertex AI (Gemini) + <code>gemini-embedding-001</code> 768d	Enterprise SLA, no free-tier RPM limits
Frontend	React 18 + Vite + Ant Design	Rapid admin UI iteration
Deployment	Docker Compose + Nginx + Cloudflare	Single-host launch, no cloud lock-in

3.3 Account-as-a-Service (AaaS) — Three Asset Layers

Layer	Asset	Customer View
Account Layer	1000+ pre-warmed TG accounts, grouped by cannon/scout/actor/sniper	Ready to use, auto-replaced on ban
Capability Layer	Full software stack: orchestration + AI lead-gen + sales handoff	No coding, UI config
Service Layer	Customer success + risk advisor + script optimization	Guided, never stranded

4. Core Business Flows

4.1 Customer Purchase & Onboarding Flow

```
Customer visits site → selects plan (by accounts + groups) → pays monthly fee
↓
Platform allocates dedicated account pool (tenant-isolated)
↓
Customer logs in → uploads KB (PDF/Word/web) → configures AI persona → sets script
↓
Customer configures hunting grounds (competitor / industry group links)
↓
Platform launches Scout monitoring + AI scoring + Sniper outreach
↓
High-intent leads → sales takes over in Inbox → Copilot-assisted closing
```

4.2 Three Core Lead-Gen Pipelines

A. Competitor Interception (Real-Time)

```
Scout joins competitor group → listens for new members → AI scoring
→ Sniper DMs within 5 minutes → user replies → AI multi-turn negotiation
→ high-intent alert → sales takes over → closes deal
```

B. Bulk Group Washing (Weekly)

```
Scout bulk-scrapes public groups (500-1000 members each) → AI batch scoring
→ Tier-A direct DM / Tier-B funnel into nurture group / Tier-C discard
→ Actors run hype scripts in nurture group → engaged users harvested by Sniper
```

C. AI Service + Sales Takeover (Core Commercialization Loop)

```
Inbound TG DM → KB retrieval (pgvector) → intent analysis → AI reply
→ intent=purchase + is_high_value → WebSocket high-intent alert
→ Sales clicks "Take Over" → Lead.ai_enabled=false
→ AI switches to Copilot (no auto-send, generates drafts + live negotiation summary)
→ Sales one-click send / edit-and-send → deal closed
```

5. Module Functionality Matrix

5.1 Backend Services (50+)

Module Group	Key Services	Function
Account Lifecycle	auto_register device_generator session_* warmup_service	Registration, device fingerprint, session, warm-up
Proxy Network	proxy_fetcher proxy_checker proxy_assigner	API fetch, connectivity check, ISP binding
TG Communication	telegram_client client_pool listener_service	Pyrogram pool, 5-shard listener
Task Scheduling	safe_send_dispatcher shill_dispatcher script_executor workflow_engine	Rate-limited send, hype, script, workflow
AI Engine	ai_engine llm ai_reply_service conversation_director	LLM routing, reply generation, dialog state
Knowledge Base	embedding_service kb_retrieval qa_extractor	Vertex Embedding, vector recall, Q&A extraction
Acquisition & Marketing	scraper intercept_service keyword_monitor_service invite_service	Group scraping, interception, keywords, invites
CRM & Profiling	score_service persona_profile	User scoring, persona profile
Billing & Quota	pricing usage_tracker permission_service	LLM billing, tenant quota (core monetization)
Infrastructure	websocket_manager system_config_service mega_importer	Realtime push, dynamic config, bulk import

5.2 Frontend Pages (25+)

Module	Page	Value
Account Pool	AccountList / AutoRegister / ProxyList / Warmup	Customer sees rented account status
Campaign	CampaignPage / TasksPage / Marketing / ScriptPage	Customer configures campaigns
Hunting Ground	SourceGroupPage / FunnelGroupPage / Scraping / InvitePage	Customer configures target groups
AI Center	AIPage / KnowledgeBasePage / PersonaPage / ai/*	Customer trains own AI
Sales Workbench	CRM / Inbox (Copilot)	Sales execution
Data	Dashboard / MonitoringDashboard / MonitorPage / LogsPage	Customer views ROI
System	Login / SystemConfigPage	Customer admin

6. Business Model (Core Chapter)

6.1 Pricing Model: System Account Licensing

Three Standard Tiers (USD-denominated, global customers)

Plan	Monthly	TG Accounts	AI Target Groups	Avg Groups/Account	AI Token Included
Starter	\$199 / mo	3	500	167 grp/acc	2M tokens
Growth	\$299 / mo	5	1,000	200 grp/acc	5M tokens
Pro	\$599 / mo	10	3,000	300 grp/acc	15M tokens

"AI Target Groups" defined: max number of TG groups monitored & engaged for the customer, including competitor / industry / general-traffic groups. Customer filters by industry; platform accounts auto-join and run AI lead-gen.

6.2 What Each Plan Delivers (Standardized SKU)

Deliverable	Starter	Growth	Pro
Customized TG accounts (industry-matched username/avatar/bio)	3	5	10
AI persona customization (Sales / Analyst / Active Member)	1 set	2 sets	3 sets
Auto-generated industry KB (scrape + embed)	1	2	5
AI target group coverage	500	1,000	3,000
AI auto-reply + Copilot			
CRM + Inbox sales workbench seats	1	3	10
Auto-replacement SLA on ban	24h	12h	4h
Customer success	Ticket	Ticket + monthly review	1-on-1 dedicated CSM

6.3 Add-On Revenue

Item	Pricing
AI token overage	\$5 / million tokens
Extra accounts	Starter \$50/acc, Growth \$45/acc, Pro \$40/acc (tiered)
Extra target groups	\$20 / 100 groups / month
Custom KB import service	\$80 / batch (PDF <100 pages free)
Residential proxy upgrade	\$5 / account / month
Self-hosted deployment	From \$12,000 / year
Industry template customization (script + KB + persona)	\$300 / batch

6.4 Per-Account / Per-Group Cost Structure

TG account monthly amortized cost (SMS + warm-up + proxy + infra):

Item	Cost (¥)
Registration (SMS-Activate + one-time proxy)	15
Warm-up amortization (30 days)	7
Monthly ops (proxy + server)	15
Avg lifecycle 4 months → monthly amortized	¥ 25 ≈ \$ 3.6

Per-group monthly cost:

- Join + message monitoring + Listener shard overhead → ~¥0.05 / group / month (marginal cost near zero)

Per-customer AI token cost (Vertex AI Gemini):

- 200-1500M tokens included, avg Vertex price ¥0.7 / M output tokens → ¥10-100/mo cost

6.5 Per-Plan Unit Economics (Critical)

Item	Starter	Growth	Pro
Monthly fee (USD)	\$ 199	\$ 299	\$ 599
Monthly fee (¥, @ 7.0)	¥ 1,393	¥ 2,093	¥ 4,193
Account cost	¥ 75	¥ 125	¥ 250
Group coverage cost	¥ 25	¥ 50	¥ 150
AI token cost	¥ 25	¥ 60	¥ 180
Customer success amortized	¥ 30	¥ 80	¥ 250
Total direct cost	¥ 155	¥ 315	¥ 830
Monthly gross profit	¥ 1,238	¥ 1,778	¥ 3,363
Gross margin	89%	85%	80%

Blended gross margin ≈ 84% (well above SaaS industry average 70-80%, thanks to near-zero marginal cost on account + group assets + automated ops).

6.6 Blended ARPU & LTV/CAC

Plan mix assumption: Starter 50% / Growth 30% / Pro 20%

Metric	Value
Blended monthly fee	$\$199 \times 0.5 + \$299 \times 0.3 + \$599 \times 0.2 = \$ 308 \approx ¥ 2,160$
Blended monthly gross profit	¥ 1,790
CAC	¥ 1,500 / customer
Monthly retention	90%
Avg lifecycle	10 months
LTV	$\approx ¥ 2,160 \times 10 \times 0.84 \approx ¥ 18,144$
LTV / CAC	≈ 12
Payback period	< 1 month

6.7 Three-Year Revenue Forecast

Year	Paying Customers	Blended ARPU (USD)	MRR (USD)	ARR (USD)	ARR (¥)	Milestone
Y1 (2026)	60	\$ 308	\$ 18.5k	\$ 222k	¥1.55M	PMF validated, account pool 2000
Y2 (2027)	280	\$ 350	\$ 98k	\$ 1.18M	¥8.25M	Crypto + cross-border head customers
Y3 (2028)	900	\$ 400	\$ 360k	\$ 4.32M	¥30.24M	Series A / overseas expansion

7. Technical Moats & Differentiation

7.1 Three Moats

① Account Supply & Warm-up Engineering (Highest Barrier)

Hardest part for competitors to replicate:

- Auto-registration: SMS-Activate + IP2World + device fingerprint → ¥15/account cost
- Auto warm-up: `warmup_service` simulates human behavior for 30-60 days
- Risk tiering: cannon/scout/actor/sniper 4 roles + health score + auto-demotion
- Replacement supply: auto-replace banned accounts in customer pool within 1 hour

② 1000+ Account Real Engineering Capability

- Listener sharded by `account.id % N` , 5 shards support 1000+ long connections
- Multi-replica Workers + `max-tasks-per-child=200` prevents Pyrogram memory leaks
- PG `max_connections=500` , Redis `maxmemory=4G` `noeviction`
- Most TG control tools stop at 50-200 accounts

③ AI Copilot + Sales Collaboration Product Form

- Competitor A (pure orchestration): only "blast tool", no AI, no sales handoff
- Competitor B (AI service SaaS): ChatGPT wrapper, no sales collaboration
- **TG1**: AI handles 80% long-tail traffic + auto-alert sales on high-intent + AI continuously generates drafts/summaries

7.2 Network Effect Moat

Pre-warmed account inventory is a network effect:

- More customers → faster pool churn → lower marginal cost/account → better pricing
- Different customers have different account requirements → secondary account flow (used Cannons demoted and reused)

8. Competitive Landscape

8.1 Comparison Table

Dimension	TG1	Competitor A (Scripts)	Competitor B (AI Service)	Self-Build
Account supply	Platform-supplied, leased	Customer brings own	–	Customer builds (hardest)
Account scale	1000+ pre-warmed pool	Customer's own (<200)	–	6 months to start
AI lead-gen	KB+RAG+Intent+Copilot	None	ChatGPT wrapper	–
Sales handoff	Copilot mode	None	Simple human escalation	Manual
Risk tiering	4 roles + health score	Basic rate limit	–	Experience-dependent
Customer onboarding	\$199/mo, 5 min	¥5-50k tool fee	¥500-5000/mo	¥300k + 6 months
Auto-replacement	Automatic	Customer bears	–	Customer bears
Deployment	SaaS lease + self-hosted	Local only	SaaS only	Self-build

8.2 Positioning

TG1 = "The Cloud of TG Marketing"

Competitors sell "control scripts" = sell physical servers

TG1 sells "accounts + compute + AI" = sells cloud services

Don't compete on price with orchestration tools — we sell "end-to-end lead-gen + ongoing supply"

Don't compete on models with AI service SaaS — our value is "account inventory + engineering + sales collaboration"

Differentiate on onboarding + ongoing operations — customer math: self-build ¥300k vs lease ¥2,100/mo

9. Product Roadmap

Completed (Stage 1-8 + part of Stage 9)

Account full lifecycle / proxy pool / session management
 AI marketing / hype / keyword monitoring / interception
 CRM customer management / Inbox unified chat
 Dashboard / realtime monitoring / alerts
 pgvector vector retrieval + Vertex AI unified integration
 1000+ account capacity expansion (code shipped, prod compose pending switch)

Within 12 Months (Funding Cycle)

Q1 (M1-M3) — PMF Validation

- Multi-tenant isolation (account pool per customer, quota management)
- Self-service signup + billing (per account + usage)
- Sales Copilot UI polish (AI on/off + draft suggestions + live summary)
- Onboard 3-5 seed customers in private beta

Q2 (M4-M6) — Commercial Launch

- Multi-source KB import (PDF/Word/web/chat-history extraction)
- Negotiation stage modeling (need discovery → quote → bargain → close)
- Public launch + price-list rollout
- Target: 20+ paying customers, MRR > ¥100k

Q3 (M7-M9) — Scaling

- Auto-replacement mechanism (auto-replace banned accounts)

- Customer success system
 - Target: 40+ paying customers, MRR > ¥200k
- Q4 (M10-M12) — Series A Prep**
- Multi-language expansion (RU/EN/AR)
 - Multi-channel planning (WhatsApp / Discord)
 - Target: 60+ paying customers, MRR > ¥300k, initiate Series A

10. Team

Placeholder — please fill with actual details

Current Team (Recommended Size: 3-4)

Role	Responsibility	Background	Status
Founder / CEO	Strategy, commercialization, sales	5+ yrs TG private-traffic / export	–
CTO / Full-stack	Architecture, platform engineering	5+ yrs Python + distributed	–
AI / Backend	AI pipeline, RAG, risk control	2+ yrs LLM application	–
Ops / CS	Account supply, customer support	TG marketing operations	–

Post-Funding Expansion (12 months)

Hire 2-3: 1 sales + 1 CS + 1 senior backend

11. Financial Projection

11.1 12-Month MRR Forecast (USD / CNY dual)

Exchange rate: 1 USD = 7.0 CNY; blended ARPU uses 50%/30%/20% plan mix.

Month	Cumulative Customers	Blended ARPU (USD)	MRR (USD)	MRR (¥)	Cumulative ARR (¥)
M1-M3	3-5 (seed, half-price/free)	–	< \$1k	< ¥7k	–
M4	10	\$ 250	\$ 2.5k	¥17.5k	¥210k
M6	25	\$ 280	\$ 7.0k	¥49k	¥590k
M9	45	\$ 300	\$ 13.5k	¥95k	¥1.13M
M12	60	\$ 308	\$ 18.5k	¥130k	¥1.56M

11.2 12-Month P&L Forecast (¥ ten thousands / 万)

Item	M1-M3	M4-M6	M7-M9	M10-M12	Full Year
Revenue	0.5	7	20	35	62.5
Direct cost (accounts + proxy + AI + CS)	1	2	3.5	5.5	12
Gross profit	-0.5	5	16.5	29.5	50.5
People cost	8	10	12	14	44
Server & infra	2	2	3	4	11
Marketing acquisition	1	4	6	8	19
Other	1	2	2	3	8
EBITDA	-12.5	-13	-6.5	0.5	-31.5

Key Milestones:

- **M10-M12** approaching monthly EBITDA breakeven
- **Y2 Q1** sustained profitability, Series A prep
- **3-year blended gross margin 84%** is top-decile SaaS, thanks to ultra-low marginal cost on accounts + groups

Note: Y1 EBITDA loss is normal for angel-stage PMF validation. ¥315k loss is within ¥500k raise.

12. Investment Plan

12.1 Round Terms

Item	Detail
Round	Angel
Amount	¥ 500,000 CNY (~\$ 71,000 USD)
Pre-money valuation	¥ 4,000,000
Post-money valuation	¥ 4,500,000
Equity offered	11.1% (negotiable 10-15%)
Runway	12 months
Board seat	Observer seat (non-controlling, no day-to-day decisions)
Anti-dilution	Weighted-average anti-dilution

12.2 Use of Funds (¥500k / 12 months)

30%	Account Pool (¥ 150k) - Cumulative 2000 accounts purchased (SMS ¥30k) - Warm-up period proxy + servers (¥80k) - Reserve pool (¥40k)
25%	Team (¥ 125k) - Founder + 1 co-founder 12-month sub-stipend - Part-time AI / frontend engineer
25%	Infrastructure (¥ 125k) - Servers (PG + Redis + Worker cluster) ¥50k - Vertex AI Token (Embedding + LLM) ¥50k - Premium residential proxies (IP2World) ¥25k
15%	Marketing Cold Start (¥ 75k) - Industry-group placement / KOL ¥30k - Content marketing / case studies ¥20k - Crypto / cross-border events ¥25k
5%	Reserve (¥ 25k)

12.3 Exit Strategy

Path	Timeframe	Notes
Series A	12-15 months	Target raise ¥5-10M, valuation ¥30-50M
Strategic M&A	3-5 years	Potential acquirers: CRM giants, Web3 infra, cross-border SaaS
Continued dividend	–	Early dividend possible (84% gross margin, fast payback)

13. Risk & Mitigation

Risk	Severity	Mitigation
TG policy change / mass bans	High	4-role tiering + health score + ISP binding + auto-replacement; plan multi-channel (WhatsApp/Discord)
Account supply source cut off	Medium	Multi-platform SMS backup (SMS-Activate / 5sim / smshub); build small in-house registration
AI cost increase	Low	Already on Vertex optimal tier; plan self-hosted Qwen/Llama as fallback
Compliance risk (data/marketing)	Medium	Reject illegal customers; ToS prohibits gambling/scam use
Competitor copies business model	Medium	Account supply chain + warm-up engineering is high barrier; first-mover advantage locks head customers
Customer willingness below expectation	Medium	M1-M3 beta validates PMF; flexible pricing (Starter \$199 lowers barrier)
Founding team stability	High	4-year vesting + 1-year cliff; raise covers 12 months
